- Building ISACMoE, a CSI-anchored hierarchical mixture-of-experts model for sensing-assisted communications, and contributing to UniFuse, a fusion framework for wireless foundation models.

Graduate Research Assistant, NIS Lab, UAH Jan 2024 – Dec 2025

- Co-developed SimQFL, a quantum federated learning simulator with real-time visualization (IEEE QCE 2025).
- Developed a federated learning framework for detecting false data injection attacks in edge-based smart metering networks (IEEE CCNC 2025).
- Contributed to secure UAV-assisted federated learning using digital twins and zero-knowledge proofs, and authored a comprehensive survey on quantum federated learning (IEEE Communications Surveys & Tutorials).
